Education

Addis Ababa Science and Technology University (AASTU)

Jun 2021 – Jun 2025

Bachelor's Degree in Software Engineering

Relevant Coursework: Internet Programming, OOP, Database Systems, Operating Systems, Data Structures, Algorithms, Cloud Computing

ALX Professional Foundation Program – Cloud Computing Track

Nov 2024 – Jun 2025

- Gained hands-on experience in AWS services and cloud infrastructure deployment.
- Led a squad as Squad Leader, coordinating meetings and mentoring peers on technical tasks.
- Designed cloud architectures for real-world scenarios emphasizing reliability and scalability.
- Prepared for AWS certifications including Cloud Practitioner and Solutions Architect.

Experience

Deputy Managing Director (Technical Leadership / Co-Founder)

Oct 2025 – Present

Tensae Development PLC

- Led backend development and deployment workflows for multiple client projects using **Express.js** and **PostgreSQL**, focusing on scalable APIs, authentication systems, and database optimization.
- Developed and deployed dynamic landing pages, corporate websites with e-commerce functionality, and a tournament management platform tailored for client business requirements.
- Managed VPS deployments, server configuration, application hosting, and production environment maintenance for reliable client delivery.
- Collaborated across frontend and backend systems, contributing to responsive web interfaces, RESTful APIs, and full-stack feature integration.
- Oversaw development workflows and coordinated technical implementation across multiple ongoing client projects.
- **Technologies:** Express.js, PostgreSQL, Node.js, Docker, VPS Hosting, REST APIs, JavaScript

Software Developer (Android & Backend)

May 2025 – Sep 2025

Novifidel Technologies

- Led development of two production Android applications using **Kotlin** and **Jetpack Compose**, designing reusable UI components and maintaining consistent user interface patterns.
- Implemented Firebase push notifications, real-time location tracking, digital queuing workflows, and Google Maps routing features.
- Integrated Chapa payment services and improved backend performance through database query optimization and API refinement.
- Collaborated across mobile and backend systems, overseeing database design and system integration using Express.js and PostgreSQL.
- Contributed to scalable architecture decisions and mentored three interns on Android development best practices.
- **Technologies:** Kotlin, Jetpack Compose, Firebase, Google Maps, Express.js, PostgreSQL, Docker, Redis

Mobile Developer (Capstone Project)

Mar 2025 – May 2025

Gebeya Inc.

- Developed an Android application for SIM registration and activation using **Jetpack Compose** and modern Android architecture principles.
- Built responsive UI flows and integrated Google ML Kit for face detection and identity verification workflows.
- Implemented a simulated Fayda ID authentication service and contributed to backend data handling using MongoDB.
- Applied clean architecture practices to separate UI, domain, and data layers for maintainability and scalability.
- **Technologies:** Kotlin, Jetpack Compose, Node.js, Express.js, MongoDB, Google ML Kit

Projects

Comic Reader App & API

- Built an Android comic reader application using **Kotlin and Jetpack Compose** consuming a custom Ktor API for comic metadata and page delivery.
- Implemented reusable Compose UI components for reading screens, navigation flows, and content browsing to ensure consistent UI behavior across the application.
- Designed features including bookmarks, reading history, offline caching, and advanced search filtering.
- Applied **Clean Architecture** with dependency injection (Hilt) to separate UI, domain, and data layers for maintainability and scalability.
- **Technologies:** Kotlin, Jetpack Compose, Ktor, Room DB, Hilt

SIMplify – Self SIM Registration App

- Developed an Android application guiding users through SIM card registration and activation workflows using **Jetpack Compose**.
- Designed multi-step registration screens with clear state management and responsive UI feedback.
- Integrated **Google ML Kit** for face detection and implemented identity verification flows through a simulated Fayda ID service.
- Collaborated with backend services built in Express.js and MongoDB for secure data submission and processing.
- **Technologies:** Kotlin, Jetpack Compose, Express.js, MongoDB, Google ML Kit

Amharic Screenplay Writing App (ASWA)

- Developed an Amharic script writing platform with AI-assisted writing features.
- Integrated a spell-check API improving correction accuracy by 50
- Implemented storyboard image generation APIs.
- **Technologies:** React, Laravel, MongoDB, FastAPI, Python, Gemini API

Volunteer Experience

AWS Mentor – ALX Program

Guided learners on squad projects, conducted weekly AWS tutoring sessions, and supported certification preparation.

Achievements

ALX Professional Foundation – Squad Project Winner (Pan-Africa)

Won 1st place for developing an antimicrobial resistance awareness platform recognized for innovation and social impact.

Certifications

AWS Certified Solutions Architect – Associate

Jun 2025

[View Credential](#)

AWS Certified Cloud Practitioner

Jan 2025

[View Credential](#)

Skills

Mobile Development: Kotlin, Jetpack Compose, Android Architecture, Firebase

Backend Development: ASP.NET Core, Express.js, REST APIs

Languages: Kotlin, C, JavaScript, Java, Python, PHP

Databases: PostgreSQL, MongoDB, SQL Server, MySQL, Room

Tools: Git, Docker, AWS, Firebase, Supabase, Redis
